Election/Restrictions

1. Newly submitted claims 11-16 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

The inventions are distinct, each from the other because of the following reasons: The inventions as grouped are distinct inventions not useable together or in the same system. The two groups of inventions are useable apart from each other and have unique specific structures not required of the other, and can therefore be separately useable as distinct inventions. For example the invention as originally claimed does not require the feature of "the error correction code encoder.... and the second error correction code encoder operable to encode the interleaved data stream to produce a second encoded data stream" as specified in the newly submitted invention (claims 11-16). And it is further noted that the newly submitted invention (claims 11-16) does not require the feature of the "period of the guard interval of the layer B being larger than the period of the guard interval signal in the layer B" as specified in the original claims 6-10.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 11-16 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.
